rafii-afif.vercel.app

Bandung, West Java

SUMMARY

DevSecOps Engineer with 4+ years of experience across DevOps, platform engineering, and enterprise IT operations. Experienced in building secure CI/CD pipelines using Jenkins, OpenShift, Kubernetes, Docker, SonarQube, Snyk, Trivy, and Artifactory. Passionate about automating software delivery while improving security, reliability, and developer productivity.

EXPERIENCE

DevSecOps Engineer

05/2026 - Present

AXA Insurance Indonesia

- Integrated SAST, SCA, DAST, and container security into CI/CD pipelines, enabling early detection of vulnerabilities and shifting security left in the development lifecycle.
- Implemented security gates in Jenkins pipelines to prevent insecure code and unauthorized vulnerabilities from reaching production.
- Standardized SBOM generation using CycloneDX, providing complete visibility into third-party dependencies and protecting against supply chain vulnerabilities.
- Automated vulnerability scanning using Trivy, Snyk, Checkmarx, and OWASP ZAP.
- Implemented secret detection using Gitleaks, proactively protecting sensitive company credentials and preventing data exposure in public/private repositories.
- Collaborated closely with development teams to remediate security findings, fostering a security-first culture and streamlining the path to secure releases.
- Integrated SonarQube Quality Gates to enforce code quality and security standards.
- Standardized security scanning across multiple applications to improve DevSecOps maturity.
- Supported secure release processes by embedding automated security controls into the CI/CD lifecycle.

DevOps Engineer

05/2025 - 05/2026

AXA Insurance Indonesia ↗

- Designed and automated Jenkins CI/CD pipelines, eliminating manual deployment bottlenecks and accelerating the software delivery lifecycle.
- Integrated Jenkins with OpenShift to streamline continuous integration and application deployment.
- Created reusable Jenkins Shared Libraries, standardizing CI/CD across multiple teams and significantly reducing pipeline setup time for new projects.
- Managed Kubernetes resources, including Deployments, Services, ConfigMaps, Secrets, Ingress, and Routes in OpenShift.
- Configured rolling updates and Pod Disruption Budgets (PDBs) in OpenShift, ensuring continuous application availability and zero user disruption during releases.
- Optimized cluster resource utilization through Kubernetes CronJobs and scheduled workloads.
- Configured and managed JFrog Artifactory for centralized artifact storage, versioning, and dependency management.
- Developed comprehensive Grafana dashboards, enabling real-time monitoring and proactive resolution of system anomalies before they impacted end users.
- Automated build validation, smoke testing, and deployment processes to improve release reliability.
- Collaborated with development teams to troubleshoot build failures, deployment issues, and runtime incidents.
- Standardized CI/CD workflows across multiple projects to improve release consistency and developer productivity.
- Managed application configuration across environments using Kubernetes ConfigMaps and Secrets.
- Supported Git-based development workflows, including pull request validation and automated pipeline execution.
- Replaced manual, error-prone deployment processes with automated pipelines, greatly increasing release reliability and reducing operational overhead.
- Participated in troubleshooting production issues and performing root cause analysis to improve platform stability.

IT Operations

12/2024 - 05/2025

Great Eastern General Insurance ↗

- Maintain and troubleshoot: Manage laptops, desktops, printers, peripherals, and software.
- Application support: Manage and support email (Outlook), Teams, Office applications, and backup policies.
- Security and user management: Implement data security protocols, manage user access permissions, and handle user accounts in Active Directory.
- Ticketing and remote support: Create, monitor, and resolve ServiceNow tickets and provide remote support using LANDesk.
- Asset management and monitoring: Track and maintain IT asset inventory, generate status reports, and perform regular security scans.

IT Support Engineer II

01/2023 - 11/2024

Accelbyte ↗

- Troubleshoot and Support: Address hardware, software, and network issues, escalate when needed, and assist users with technical problems using tools like Jira and NinjaRMM.
- Setup and Maintenance: Install and configure systems, applications, and hardware, manage user accounts and permissions, and ensure is secure and up-to-date.
- IT Projects: Implement system upgrades and migrations, track progress in Jira, and document workflows in Confluence.
- Automation and Monitoring: Develop automation scripts, monitor system performance, and report issues using NinjaRMM.
- Asset and Vendor Management: Maintain IT asset inventory Using Excel, track changes, and collaborate with vendors for support and procurement.
- Performance and Security: Monitor system performance, ensure security through updates and protocols and maintain records, user guides, and reports.

Business Operations Associate

04/2021 - 12/2022

Hubster Indonesia

- Respond quickly to perform troubleshooting or other technical assistance required by the customers
- Analyze new ways to solve problems faster and more efficiently
- Provide professional technical solutions that are responsive to customer's needs
- Provide online or offline technical training and presentations
- Make a report/ticket if there is some bug to the product team.

Full Stack Developer

01/2020 - 06/2020

PT. Cemara Agung Mandiri

- Responsible for working on both front-end and back-end development processes
- Create design, develop, and maintain fully-fledged and functioning platforms with databases With supply chain management method, using PHP programming language with CodeIgniter Framework.

EDUCATION

Informatics Engineering

09/2016 - 10/2020

Universitas Jenderal Achmad Yani - Bachelor

GPA : 3,41 / 4,00

Informatics Engineering specializing in Data Software Engineering is a dynamic and rapidly evolving field combining computer science, information technology, and data analysis.

CERTIFICATES

End to End DevOps Implementation on an E-Commerce project (Course)

03/2025 - Present

Abhishek Veeramalla

This course provides a comprehensive guide to setting up, configuring, and managing projects using AWS and Docker. It covers key topics like infrastructure as code, containerization, continuous integration/deployment, and custom domain setup. Through hands-on practices, you'll learn to deploy, manage, and verify your projects efficiently on cloud platforms.

JIRA Software & Confluence Expertise (Course)

Kosh Sarkar

Learn to work on, manage & administer agile projects with this comprehensive course on JIRA Software & Confluence

11/2024 - Present

CCNA 200-301 Enterprise (Course)

Nixtrain

The CCNA 200-301 Enterprise is a certification exam offered by Cisco, one of the leading networking technology companies globally. This certification is part of Cisco's new certification program, replacing several older certifications, and it is designed to validate the skills and knowledge of networking professionals in modern networking technologies.

12/2022 - Present

ITIL® v4 Foundation

AXELOS Global Best Practice

ITIL (Information Technology Infrastructure Library) is a set of best practices for IT service management (ITSM) that helps organizations align their IT services with the needs of the business.

12/2023 - 09/2026

SKILLS

CI/CD Pipeline Orchestration (Jenkins)	GitOps & Release Management (GitHub)
Containerization (Docker & OpenShift)	Observability & Monitoring (Grafana)
DevSecOps (Snyk, Trivy, SonarQube, Gitleaks)	Cloud Infrastructure (AWS & OpenPaaS)
Automation & Scripting (Bash & Node.js)	System & Network Troubleshooting
